Model: MWA32-33HTR, Elite Welded Aluminum Triple axle.

Standard Features

Welded Aluminum Channel Frame.

Fully welded frame design with its welded cross members and welded bunk supports deliver greater strength and stiffness than the "one size fits all" bolt together style frames.

Self Centering Double Bunk Hull Support System.

Fully welded, inner and outer, paired hull support columns positioned to evenly support and match a specific hull shape. Heavy duty marine carpet. Through-bolted longitudinal bunks with stainless steel fasteners and double locking nuts. No over width guide poles required for centering.

Bow Stop, "Y" Style with Rubber "D" Blocks. Designed to each boat for additional hull support and positive retrieval stop. The most effective design for protecting and positioning boat onto trailer.

Tie Down Eyes. Two pair, forward and aft, for securing boat to trailer during road transport.

Winch Stand. Designed for each boat for proper height and clearance. Low energy storing 3" strap on 2-speed 3,700 lb winch. Not a one size fits all winch stand.

Sling Lift Capable. Forward and aft openings in bunk system for lifting strap access.

Aluminum Walk on Fenders and Steps. Rolled double radius, smooth surface.

Triple 5,200 lb Torsion Axles with 6-Lug Hubs. Progressive spring rate for smoother ride. Less maintenance than leaf springs. Galvanized. 5 year warranty.

"EZ-Lube" Spindle System. Allows grease flow to inner and outer bearings for a complete repack w/o hub removal.

"Air-Tight" Pressurized Hub Protectors. Positive pressure hubs, stainless steel wear band and "Viton" seal. Preventing water intrusion and bearing failures from water contaminated grease.

Hydraulic Surge Brake Actuator. Proven track record of reliability and simplicity. 20,000 lb capacity. 2-5/16" ball.

Disc Brakes on all 3 axles. 12" rotors, 2.25" diameter stainless steel pistons, stainless steel guide bushing and guide bolts. Designed for marine use. Self adjusting, low maintenance. 2-year warranty.

Brake Lines, Seamless Stainless Steel. DOT and SAE approved with double flare connections, as compared to non approved continuous plastic lines with compression sleeve fittings.

Goodyear Radial Tires. ST235/80R16 Load Range E, 3,420 lb capacity each. Selected with higher capacity than overall trailer rating for superior wear, ride, reliability and safety.

Aluminum Wheels, 6-lug. Powder coated for superior corrosion protection and air pressure retention.

McGard Chrome Lug Nuts. Proven not to rust or chip.

Tongue Jack, Heavy Duty 5,000 lb Capacity Drop Leg. Higher vertical lifting range and durable heavy duty long lasting machined gears. Side wind.

Groundless Wiring System. Heat shrink butt connectors with activated sealant. Prevents corrosion and electrical wiring failure, common with other connectors and frame grounded systems.

LED (light emitting diode) Lighting. Brighter, faster illumination, lower current draw and longer lasting. Premium commercial heavy duty.

Electrical Plug, 7-Blade RV. Matching all major, light and medium truck manufacturers electric receptacles.
